

04 Workflow Diagram - Xanh SM Battery Incident Current State

Step 1: Driver calls dispatch about low battery - 2 min

Handoff: phone call from driver to dispatcher

Step 2: Dispatcher asks vehicle plate, GPS location, battery percent - 2 min

Handoff: dispatcher checks vehicle dashboard

Step 3: Dispatcher searches VinFast charging stations and available plugs - 3 min

Handoff: dispatcher switches from vehicle dashboard to station dashboard

Step 4: BOTTLENECK - Validate charger compatibility, station distance, traffic risk - 5 min

Risk: wrong station choice may strand the EV if battery is critical

Step 5: BOTTLENECK - Draft Vietnamese route guidance manually - 4 min

Risk: message can be sent without enough review during peak hour

Step 6: Dispatcher sends guidance or calls mobile charging team - 1 min

Total current handling time: about 17 minutes per incident

Legend: BOTTLENECK = slow/error-prone step. Handoff = information moves between people or systems.
